

AI News Generator

Turn stories, scripts, and article links into broadcast-style news videos with an AI anchor.

About

AI News Generator is an AI news video generator that turns a topic, script, article link, or RSS feed into a broadcast-style clip in minutes. It is built for people who want a news video without cameras, studio setup, or editing software, and it can draft or polish the script before rendering. You can choose an AI anchor, a voice, a studio background, and a language, then export the finished video in the aspect ratio you need.

What is AI News Generator

AI News Generator is an AI news video generator built to convert written input into a

link, RSS feed, or full script, then assembles a finished clip with natural voiceover, on-screen captions, and lower-third graphics. The app is positioned for fast production, so you can go from idea to export without manual editing.

It is designed around news-style output rather than generic video generation. That means the final result is framed like a short broadcast segment, with a scripted presentation and newsroom-style visual elements. The site also shows a free-start flow, so the AI news video generator can be tested before committing to a paid plan.

Key features

The AI news video generator focuses on turning text into a structured broadcast video with minimal steps.

Multiple input types: paste a headline, story prompt, article URL, RSS feed, or a complete script.

Script help: the tool can draft a tight news script from your input, or you can supply your own and move directly to production.

AI anchor selection: pick a news anchor avatar, a voice, and a studio background.

Multilingual support: choose a language for delivery, which makes the AI news video generator useful for multilingual publishing.

Automatic visual packaging: the output includes captions and lower-third graphics, plus a breaking-news style presentation when relevant.

Export ready: render the final video in your chosen aspect ratio and download it for publishing.

No editing skills required: the workflow is built so users do not need camera gear, studio access, or editing experience.

This AI news video generator is also framed as a tool for creators, newsrooms, and marketing teams, which suggests it can fit both editorial and promotional workflows when the source material is suitable.

How to use it

Using the AI news video generator follows a four-step flow shown on the site.

AI News Generator

Let AI shape the script. The system can write a broadcast-style script from your input or refine a script you bring in yourself.

Choose presentation settings. Select an AI anchor, a voice, a studio background, and the language you want for the output.

Generate and export. Render the video in the aspect ratio you need, then download the completed clip for publishing.

A practical way to think about the AI news video generator is that it handles the drafting, voicing, and editing stages together. That can shorten production time when the goal is a news-like video instead of a fully customized edit.

Who it is for

This AI news video generator is a fit for people who need quick broadcast-style content from text-based sources.

Creators who want to turn trending topics or commentary into a news-style video.

Newsrooms that need a fast way to prototype clips from breaking stories or article links.

Marketing teams that want a polished news-format explanation or announcement.

Educators and trainers who want to present information in a newsroom-style format.

Users without editing experience who still need captions, voiceover, and a studio-like presentation.

It is especially useful when the story already exists in text form and the priority is speed. If your workflow depends on a polished but repeatable AI news video generator, the app's script-to-video flow is the main benefit.

What to know before you use it

The AI news video generator is fast, but it is not a replacement for editorial review or source verification. If you paste an article link, RSS feed, or breaking-news note, you still need to check facts, names, dates, and context before publishing.

A few practical caveats matter:

It is not a live newsroom system. The app creates a video from provided material; it does not appear to verify facts against official databases or wire services.

Use official sources for sensitive topics. For legal, health, finance, or emergency reporting, confirm details with primary sources before release.

Style is broadcast-oriented. The output is meant to look like a news segment, so it may not suit brands that want a cinematic, documentary, or social-first edit.

Exact pricing and limits are not fully visible from the available material. The site shows a free-start path and a pricing page, but the source text here does not confirm plan details.

For teams that need a fast AI news video generator, this app offers a streamlined way to package text into a publishable clip. For anything fact-sensitive, finish with human review before you share the video.
